EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Bryan Butler on August 16 and 19, 2005.

The application has been amended as follows:

- a) Claim 11, line 3, replace ";" with - - , wherein said first application resides on a server; - - and;
- b) Claim 19, line 1, insert before "computer-readable" - - tangible - -;

line 3, insert after "formats," - - wherein said computer-readable medium includes one of a magnetic, optical, or other fixed or removal computer disk, a random access memory, a read-only memory, an erasable programmable read-only memory, and a portable compact disc read-only memory, - -.

2. The following is an examiner's statement of reasons for allowance. Amended claims 1, 11, 19 and 29 recite the new features: dynamically loading a message bridge module into the first application, operating the bridge module by using a userexit routine, setting a pointer to the userexit routine by making an operating system call to

Art Unit: 2194

load a userexit module into the first application's memory and workspace, resolving the userexit routine at the execution of the first application not at the compilation of the first application, the first application outputting data to the userexit module without receiving any confirmation regarding whether the data was received. Topff discloses a message bridge module but does not specify dynamically loading a message bridge by using a userexit routine. The userexit is a function for the main application that is resolved at the execution of the application, not at the compilation of the application [applicant's specification, p. 8, lines 4 – 5] and this allows the message bridge residing in the userexit of the application to be loaded without requiring code modification of the applications [applicant's specification, p. 10, lines 19 – 20]. The prior art does not teach dynamically loading a message bridge module into the first application, operating the bridge module by using a userexit routine, setting a pointer to the userexit routine by making an operating system call to load a userexit module into the first application's memory and workspace and resolving the userexit routine at the execution of the first application not at the compilation of the first application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
